energy  
efficiency

# our idea

With energy costs rising, the need to understand and control energy use is becoming increasingly important.

Monitoring is the first step towards the efficient management of resources and is a key factor in reducing your energy usage.

We specify, install and maintain energy metering solutions and Building Management Systems. We also offer advice about the latest energy-efficient products, such as LED lighting and renewable technologies, and can help you implement these systems.

Our expertise ranges from multiple-site rollout programmes to smaller bespoke schemes and includes the office, retail and financial sectors. This provides you with the confidence that we can deliver against your requirements.

# inspired installations

## C-USinstall

Our vision is to provide you with a wide range of installation options, which enable us to offer a flexible service.

### Energy Metering

All energy management initiatives rely on accurate, up-to-date energy consumption information to ensure that decisions relating to your energy plan are based on fact. Energy metering is fundamental to this, and we provide experienced teams who are able to survey and install a range of metering systems.

### Building Management Systems

We design, manufacture, engineer and commission Building Management Systems (BMS) that focus on delivering energy-efficient buildings without compromising conditions for occupiers. Whether the BMS is small or large, our design and installation philosophy remains energy focused, with our user interfaces kept simple to operate. This helps you to operate your buildings with greater knowledge and understanding.

### Energy Reduction Products

Our experience in the energy industry enables us to work with companies and manufacturers to help them deliver their energy-reduction products and services to their customers through our installation teams. We install a wide range of products and metering devices to ensure that the energy savings our customers achieve can be tracked and their reduction commitments delivered.

# cura 360 creative team

Providing the best solution is all about us understanding your business and its particular needs. Only then can we provide the best creative and value-driven ideas. We question and challenge, and recognise that delivering projects just isn't enough – we have to be better.

Cura Energy is made up of a team of people with varied skills, which enable us to be involved right from the concept stage. We can either work within the parameters of your plan or create a plan that is tailored to your needs. We cover all the angles.

# working with the best resources

We align ourselves with some of the most innovative and inspiring businesses within the energy industry. This enables us to have knowledge of the latest products, which is then, of course, available to you.

Our customers can be confident that our experience of different product applications allows us to tailor project processes and installation programmes and to deliver on agreed targets.

We are not aligned to one manufacturer or service provider so we are able to act independently and select and install a system that is suited to your needs.

# looking after our commissions

## C-UScare

Energy savings can quickly be lost through a lack of maintenance. Our structured aftercare service ensures that new or existing systems operate as intended and continue to deliver savings.

Our teams have local knowledge with national reach and are able to react to issues quickly. Communication is key, especially when multiple sites and installations are involved. Therefore, at Cura Energy we use the latest web-enabled technology to monitor what your systems are doing; this provides valuable information to help maintain your savings. Any issues can quickly be resolved either remotely or on-site by our energy engineers or by your in-house team.

# our work keeps evolving

Our industry is at the forefront of innovation and new technologies. At Cura we encourage our people to challenge everything and have a “frontiering” spirit, never accepting that what we do now is good enough, always trying to bring the next big idea, one that is a real “game changer” for our customers.

We do evolution every day, what we really aspire to is bringing revolution to our industry and you our customer.

This is what we believe maintains our excellent reputation and differentiates us from others - we work closely with you and your teams and act as an extension of your business.

# let's discuss

So, what is it that makes Cura Energy different and better?  
It is the same reason that applies to your own business:  
it's the people.
